## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 18-25, drawn to a method of cryogenic separation with a turbine for supercharged inlet air, with a bypass for the turbine, classified in class 62, subclass 645.
- II. Claims 26-34, drawn to a method of cryogenic separation with a turbine with a bypass expanding a nitrogen product stream, classified in class 62, subclass 650.

The inventions are distinct, each from the other because of the following reasons:

Inventions of groups I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of group I does not require the nitrogen turbine to function as evidenced by the fact that the nitrogen compressor is never claimed in group I. Group II has separate utility such as evidenced by the fact that the air turbine is never claimed in group II. While a method may function with both turbines, neither group relies on the other turbine for patentability. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

During a telephone conversation with Linda Russell on 11-7-2005 a provisional election was made with traverse to prosecute the invention of group I, claims 19-25. Affirmation of this election must be made by applicant in replying to this Office action. Claims 26-34 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

#### ***Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 18,24 and 25 are rejected under 35 U.S.C. 102(b) as being anticipated by the 577,349 European reference from the IDS.

The '349 European reference shows a cryogenic distillation process which uses a supercharger 22 to produce high pressure air and a turbine 76 which can be fed with compressed air which has not passed through the heat exchanger.

***Allowable Subject Matter***

Claims 19-23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bonaquist, both Agrawal et al patents and both Rathbone patents show distillation systems which use a turbine to expand compressed and cooled air. Brown shows an air separation system with a turbine having a feed that can bypass a heat exchanger, but the filing date is too late to be used against the current claims.
